Global Innovation INDEX 2015

Latin America and the Caribbean: Untapped innovation potential

When reviewing the performance of regions at the pillar level it becomes evident that each has its own strengths. Latin America and the Caribbean is an example where these strengths are latent, yet innovation has still not reached desired levels. In this region, Brazil, Argentina, and Mexico—three of the world largest economies based on their GDPs—stand out as economies performing above the region’s GII average. Yet none have been signalled as innovation achievers, while smaller nations such as Costa Rica and Guyana have reached this category in the past (see Box 4).

Figure 3: GII scores and GDP per capita in PPP\$ (bubbles sized by population)

Note: 'Efficient Innovators' are countries/economies with Innovation Efficiency ratios ≥ 0.71 ; 'Inefficient Innovators' have ratios < 0.71 ; the trend line is a polynomial of degree three with intercept ($R^2 = 0.739$).
